

Environmental Policy Statement of Intent

P and G Blacksmiths and Fabricators, as an organisation at every level, recognises that through its operations and activities it has both direct and indirect impacts on the environment. Thus we regard sound environmental management as an integral part of our business.

We are committed to a programme of continual improvement to promote legal compliance, or better, through environmental best practice throughout our operations and undertakings. Therefore it is our policy to:

1. Demonstrate compliance with and, where possible, surpass the objectives of relevant environmental legislation and other standards to which the company subscribes.
2. Wherever practicable, inform, liaise and cooperate with enforcing authorities and other interested parties, including the local community, to minimise our impact on environmentally sensitive areas and neighbourhoods.
3. Prevent pollution by ensuring systems are in place that monitor and control emissions to air, water and land to levels at which adverse impacts on the environment are avoided.
4. Improve energy efficiency by working closely with clients to purchase energy from sustainable sources wherever practicable and manage the use of energy to maximise efficiency throughout all our operations, particularly with regard to fuel consumption.
5. Effectively manage waste to minimise waste creation and maximise the recycling and reuse of waste matter wherever possible.
6. Plan, control and monitor all company activities to ensure that all client and internal Environmental Management System requirements are adequately met, where applicable, and operational tasks managed.
7. Work with government and industry groups to foster research into new technologies that improve environmental performance within our industry sector.
8. Monitor and develop our supply chain partnerships to ensure consistent high standards of environmental compliance and best practice are achieved and that goods and materials are purchased from sustainable sources wherever possible.
9. Raise awareness, encourage participation and train employees on environmental matters.

The company aims to lead by example within its sector and is committed to integrating sustainability into its business practices. The objectives set out above are reviewed on a regular basis.

Signed:

Date: 8th August 2019

Gary Carling Managing Partner
For and on behalf of P and G Blacksmiths and Fabricators
